Eternity VRLA Maintenance-Free Batteries: Charging and Liability Acknowledgment

Today's Motive Power batteries are designed for specific applications, meaning the charging algorithms required to recharge these batteries can vary significantly. If the battery is not charged to the correct voltage, it can result in irreparable damage due to overcharging or undercharging, leading to premature battery failure.

The Eternity VRLA Maintenance-Free batteries require a special charge rate. The maximum charging voltage must not exceed **2.35 volts per cell (v.p.c.)**. Exceeding this voltage can cause gassing, which leads to irreversible damage to the battery and will void the warranty, as there is no way to refill the battery.

Eternity supplies chargers with the correct algorithm to ensure your battery is always charged to the correct voltage. We understand if you have chargers in your fleet that are current you may not want to replace them. If you choose to use an existing charger in your fleet, it is **your responsibility to ensure the charger is set to the correct voltage**. Failure to do so will void the battery warranty.

Eternity is committed to providing you or your charger manufacturer with the recommended charge parameters at no additional cost to ensure that your charger is set correctly however it is your responsibility to ensure the charger is programmed correctly.

By signing this **Acceptance of Liability**, you acknowledge that you have been informed of the need to ensure your charger is set to the correct voltage. If the charger is not set correctly and damage occurs to the battery, Eternity will **not be liable for any resulting damage** to the battery.

This **Acceptance of Liability** is limited to issues related to overcharging or undercharging only and does not affect any other clauses in the Eternity warranty.

Acceptance of Liability
